

The Vpaper Technology brings
the lay-flat finishing solution to you!

MAKE YOUR REPORTS AND BOOKS EASY TO READ AND EASY TO WRITE ON

by offering lay-flat finishing solutions
for bound documents.

TODAY

Short-run book production and binding jobs continue to gain popularity globally at an accelerated rate.

As a qualified professional, offering the best type of paper to your customers is crucial to you and for the sustained success of your business.

How to make printed and bound documents lay flat is the talk of today.

Conventional binding systems with Wire-O, comb or spiral help the presentation lay flat and stay open, however, the documents are being damaged with holes for the rings.

How to eliminate these labour-intensive and damaging operations has long been a burning question for professionals like yourself.

NEW

VPAPER TECHNOLOGY

Vpaper now brings you the perfect solution which ensures that regardless of the number of sheets, your document lays flat.

Vpaper is a sheet of paper twisted with a **double-fold** near the edge of every sheet which can then be bound together with triple staples, perfect binding machines or Unibind binding systems.

The result is a completely **lay-flat book** which is easy to read and write on.

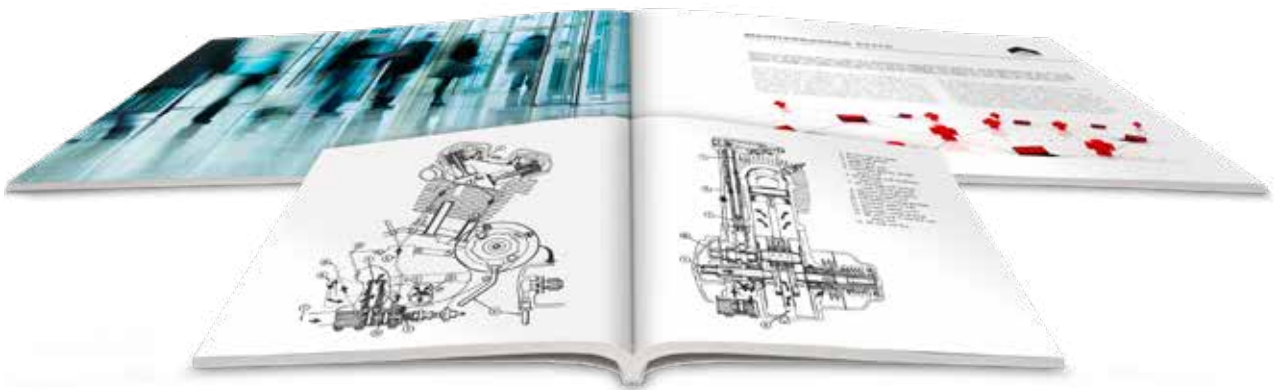

Readers of your documents always expect the best-possible printed presentations from you. From now on, you are also able to offer them the **best lay-flat finishing solution.**

BENEFITS of the Vpaper

- ✓ Vpaper makes your bound documents easy to read and write on, giving added value to all your printed productions, including
